SECTION A (60 marks)

For each question from 1 to 30, four options are given. One of them is the correct answer. Make your choice (1, 2, 3 or 4). Shade the correct oval (1, 2, 3 or 4) on the Optical Answer Sheet.

1. The diagram below shows the human digestive system.

![Diagram of the human digestive system with parts X and Y highlighted.]

How are the two parts, X and Y, similar?
(1) Both absorb water.
(2) Both absorb digested food.
(3) Both contain undigested food.
(4) Both produce digestive juices.

2. Study the classification table below.

```
<table>
<thead>
<tr>
<th>A</th>
<th>B</th>
</tr>
</thead>
<tbody>
<tr>
<td>Angsana trees</td>
<td>Ferns</td>
</tr>
<tr>
<td>Cow grass</td>
<td>Conifers</td>
</tr>
</tbody>
</table>
```

Which of the following can be placed in Group B?
(1) Mosses
(2) Cattails
(3) Duckweeds
(4) Water Hyacinths
3. A group of friends was discussing why cactus has needle-like leaves. Read their remarks below carefully.

Cactus has needle-like leaves to reduce heat loss.

The pointed ends of the needle-like leaves help to prevent its juicy stem from being eaten by animals.

Cactus has needle-like leaves so it makes less food.

Whose explanation is most likely correct?

(1) Andy only  
(2) Mei Li only  
(3) Mei Li and Lily only  
(4) Andy, Lily and Mei Li

4. Study the food web below carefully.

How many food producers are there in the food web?

(1) 1  
(2) 2  
(3) 3  
(4) 4
5. Study the pie chart on all the populations in a leaf litter community.

![Pie Chart]

Which of the following statements is definitely not true about the organisms in this leaf litter community?

1. The centipedes feed on millipedes.
2. Termites are predators to the centipedes.
3. There are four populations in this community.
4. An increase in millipedes will cause a decrease in woodlice.

6. There was a leakage of harmful chemical from a nearby factory into the River Nile, causing fishes to die. When it was discovered, the government closed down the factory.

The graph below shows the number of fish in the river over a year.

![Graph]

Which of the following shows when the leakage began causing the factory to shut down?

<table>
<thead>
<tr>
<th>Leakage began</th>
<th>Factory shut down</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1) January</td>

</tbody>
</table>
7. Which of the following statements about reproduction in animals are correct?

A: Sperms are produced by male animals.
B: Usually one egg is fertilised by many sperms.
C: After fertilisation, the eggs will develop into young animals.
D: Fertilisation always takes place inside the body of the female animals.

(1) A and C only
(2) A and D only
(3) B and C only
(4) A, B, C and D

8. In the diagram below, X, Y and Z represent the reproduction processes of a flowering plant.

Which of the following can be X, Y and Z?

<table>
<thead>
<tr>
<th></th>
<th>X</th>
<th>Y</th>
<th>Z</th>
</tr>

</table>

10. The diagram below shows a diagram of a cell from a certain organism.

The presence of Part X and Y shows that the organism ____________.

(1) produces fruits
(2) reproduces by budding
(3) depends on light to make food
(4) can live both on land and in water
11. Study the classification diagram below carefully.

What could Organisms R, S and T be?

<table>
<thead>
<tr>
<th></th>
<th>R</th>
<th>S</th>
<th>T</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1)</td>

</table>

12. Jimmy set up an experiment shown below to find out whether decaying vegetables give out a particular gas.

Which of the following should he use as a control?

(1)

(2)

(3)

(4)
13. The diagram below shows the cross-section of a flower in a garden.

![Flower Diagram]

Which of the following statements is not true about Parts A, B, C and D?

1. Part A attracts insects to help pollinate the flower.
2. Part B contains ovules that will develop into seeds.
3. If Part C is removed, this flower will not develop into a fruit.
4. A pollen tube grows within Part D after pollination has taken place.

14. Hsin Yi wants to find out if overcrowding affects the organisms living in a tank.

![Fish in Tanks]

To conduct a fair test, which two tanks should she use?

1. A and B only
2. A and D only
3. B and C only
4. B and D only
15. Raja found two wild plants, W and U, on a piece of land near a river. After a few months, he looked at the same piece of land again. His observations are shown below.

He jotted down some characteristics of the fruits of the plants he observed. Which one of the following characteristics is definitely wrong?

(1) Fruits of Plant U can float.
(2) Fruits of Plant W have stiff hairs.
(3) Fruits of Plant U can be split open by explosive force.
(4) Fruits of Plant W have fibrous husks which enable them to trap air.
16. Study the flowchart below carefully.

Choose from below the most appropriate questions for P and Q.

<table>
<thead>
<tr>
<th></th>
<th>P</th>

17. Water is poured into the following Flasks A, B and C, quickly through a funnel.

Which flask(s) will allow the water to flow into it easily?

(1) A only
(2) B only
(3) C only
(4) B and C only
18. Jia Xuan carried out an experiment using 4 different bar magnets. He placed the magnets on the plywoods which were of different thickness. The diagrams below show the number of paper clips attracted to each magnet at the end of the experiment.

Which one of the following conclusions does not describe Jia Xuan’s experiment?

(1) Magnet B has the weakest magnetic force.
(2) Magnet C has weaker magnetic force than Magnet D.
(3) Magnet C has stronger magnetic force than Magnet A.
(4) Both Magnet A and Magnet C have the same amount of magnetic force.

19. The graph below shows the relationship between the length of a spring and the mass of a weight that is hung on it.

What is the extension of the spring when a 50g-weight is hung on it?

(1) 4 cm
(2) 6 cm
(3) 8 cm
(4) 10 cm
20. Four materials P, Q, R and S, are used to scratch each other. The observations are shown in the table below.

<table>
<thead>
<tr>
<th>Material</th>
<th>P</th>
<th>Q</th>
<th>R</th>
<th>S</th>
</tr>
</thead>
<tbody>

<td></td>
</tr>
</tbody>
</table>

Which of the following shows the correct order of the materials from the hardest to the softest?

Hardest → Softest

(1) P, R, Q, S  
(2) S, R, Q, P  
(3) Q, P, S, R  
(4) S, Q, R, P

21. An experiment was carried out with four different rods, A, B, C and D. Each rod was made of a different material. The rods were at room temperature before the start of the experiment. One end of each rod was then put into a container filled with melting ice cubes. After a while, the temperature at the other end of each rod was recorded as shown in the diagram below.

Which rod, A, B, C or D, is the best conductor of heat?

(1) A  
(2) B  
(3) C  
(4) D
22. The table shows the energy conversion when electrical appliances / devices A, B and C are used.

<table>
<thead>
<tr>
<th>Electrical appliances / devices</th>

</table>
25. An experiment is set up to compare the mass of three objects P, Q and R, using two different types of rubber bands. The objects are made of different materials and the three rubber bands are of the same length before extension.

The objects are hung freely from the ceiling. Which one of the following conclusions is correct?

(1) Object P is heavier than Object Q.
(2) Object R is heavier than Object Q.
(3) Object R is heavier than Object P.
(4) Both objects P and Q have the same mass.

26. In the circuit set-ups below, similar bulbs and batteries are used. In which set-up will the bulb light up the brightest?

(1) 

(2) 

(3) 

(4)
27. Four cups of tea, A, B, C and D, at different temperatures are left on a table in the school canteen.

In which cups of tea will evaporation take place?

(1) A and B only  
(2) C and D only  
(3) A, B and C only  
(4) A, B, C and D

28. Mrs Wong set up the experiment shown below.

What observation will she make about the drop of ink in the glass tube when the water is heated up?

(1) The drop of ink will rise.  
(2) The drop of ink will drop.  
(3) The drop of ink will first drop and then rise.  
(4) The drop of ink will first rise and then drop.
29. Alice took two identical containers A and B and cut away the bottom part. He pierced a hole on each container and lowered them vertically into a basin of water.

Which of the following diagrams shows the correct water levels?
30. Two identical wooden blocks are placed on Surfaces X and Y as shown in the diagram below.

A pulling force is applied on two identical springs, A and B, attached to two identical blocks. When the wooden blocks were pulled along the surfaces, Spring A stretched twice as much as Spring B. Which of the following statements about the above experiment are true?

A: Surface X is rougher than Surface Y.
B: Surface X is smoother than Surface Y.
C: The elastic spring force exerted by Spring A on the wooden block is stronger as compared to Spring B.
D: The elastic spring force exerted by Spring A on the wooden block is weaker as compared to Spring B.

(1) A and C only
(2) A and D only
(3) B and C only
(4) B and D only
SECTION B (40 marks)

For Questions 31 to 45, write your answers in the booklet. The number of marks available is shown in the brackets [ ] at the end of each question or part-question.

31. The chart below shows the characteristics of some insects.

(a) Identify the letter, A, B, C or D, that the following insects are represented by.

(b) State another difference which is not mentioned in the above chart, between the life cycle of the mosquito and the cockroach.

<table>
<thead>
<tr>
<th>Insect</th>
<th>Letter</th>
</tr>
</thead>
<tbody>
<tr>
<td>i) Mosquito</td>
<td></td>
</tr>
<tr>
<td>ii) Cockroach</td>
<td></td>
</tr>
</tbody>
</table>
32. Jason set up an experiment in a dark room as shown below. He put a water plant in a glass jar of pond water. He then placed a lamp at different distances from the glass jar as shown in the diagram. He counted the number of gas bubbles produced in one minute.

He recorded his observations in the table below:

<table>
<thead>
<tr>
<th>Distance of lamp from water plant (cm)</th>
<th>10</th>
<th>20</th>
<th>40</th>
<th>Lamp off</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of bubbles per minute</td>
<td>60</td>
<td>30</td>
<td>20</td>
<td>11</td>
</tr>
</tbody>
</table>

(a) State the aim of this experiment. (1m)

(b) Jason’s teacher told him that besides counting the number of gas bubbles produced by the water plant, he could also observe the level of air column in the syringe. Explain why the teacher said so. (1m)

(Continue with part (c) on the next page)
(c) Jason then placed three rectangular sheets made of different materials, E, F and G, one at a time midway between the lamp and the glass jar. The distance of the lamp from the glass jar was kept constant at 10cm throughout the whole experiment.

His results are recorded in the table below.

<table>
<thead>
<tr>
<th>Rectangular sheet made of material</th>
<th>E</th>
<th>F</th>
<th>G</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of bubbles produced per minute</td>
<td>4</td>
<td>19</td>
<td>12</td>
</tr>
</tbody>
</table>

Arrange the materials E, F and G according to the amount of light passing through it in descending order. (1m)

most light passing through

least light passing through
33. Study the food web below carefully. P, Q, R, S and T are organisms living in the same community.

(a) How many food chains are there in the above food web? (1m)

(b) What is the relationship between the population of Organism R and the population of Organism S? (1m)

(c) How can Organism T be useful to Organism Q? (1m)

34. The diagram below shows a floating aquatic plant.

(a) **Mark** with the letter ‘X’ on a plant part which enables it to float on water. (1m)

(b) Explain how the part in (b) helps to keep the plant afloat. (1m)

(c) State one reason why this aquatic plant is important to some aquatic animals found in the pond. (1m)
35. The diagram below shows how blood flows in certain parts of the body.

(a) Compare the blood in A and C in terms of the amount of oxygen they contain. Explain your comparison. (1m)

________________________________________________________________________

(b) Explain why a person’s heart beat faster when he is exercising. (1m)

________________________________________________________________________

36. The diagrams below show a red blood cell and a cheek cell viewed under a microscope.

(a) Identify the cell part marked X. (1m)

________________________________________________________________________

(b) Based on the above diagrams, suggest one function that the red blood cell cannot perform as compared to the cheek cell. (1m)

________________________________________________________________________
37. The diagram below shows a pitcher plant which are found growing among other bigger trees and plants. Each leaf forms a ‘pitcher’ which contains a liquid. An insect is lured into the leaf by the nectar. Once inside, it is unable to escape as the interior walls of the leaf are slippery and there are hairs on the top that keep the insect trapped. Eventually, the insect drowns in the liquid and is digested by the plant.

(a) Explain why the pitcher plant needs to trap and digest the insects. (2m)

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

(b) Is the formation of ‘pitcher’ leaf a structural or behavioural adaptation?
Explain your answer. (1m)

________________________________________________________________________
38. Study the following set-up carefully.

(a) If Flask A is put into a basin of iced water, what will be observed about the ink droplet? Give a reason for the above observation. 

(b) Besides putting Flask A into a basin of iced water, suggest another way to get the same observation in (a).
39. The diagram and graph below show the changes in energy of a toy bunny that had been wound up.

(a) Which two lines (A, B, C, D, E) of the graph show the spring of the toy bunny being wound up?

Line _______________ and _______________  

(b) Explain how the toy bunny can be made to move a longer distance.

__________________________________________________________________________________________
40. Suzy conducted an experiment as shown below.

She released a toy car down Ramp A. Then she repeated the experiment by using two other similar ramps, Ramp B and Ramp C, which had the same length and same angle of inclination. However, she changed the texture of each ramp.

(a) State 2 measurements Suzy should take to determine if the texture of the ramps affected the results of her experiment. (2m)

_______________________________________________________

_______________________________________________________

Next, Suzy decided to repeat the above experiment using a thicker Ramp A as shown below. All other conditions remained the same.

(b) Would she observe a difference in result? Explain. (1m)

__________________________________________________________

__________________________________________________________
41. Study the experiment below carefully.

(a) At the beginning of the experiment, the clip was closed. Water from the funnel could not enter the flask. Explain why this happened. (1m)

________________________________________________________________________

________________________________________________________________________

(b) What would happen in the basin and beaker when the clip was released? State two observations. (2m)

(i) _____________________________________________________________

________________________________________________________________________

(ii) _____________________________________________________________

________________________________________________________________________
Raju bought three similar catapults, A, B and C, with rubber bands of the same length. He then used each of them to shoot a stone three times. Each time, the rubber band was pulled to the same length and released. He then recorded the distance travelled by the stone as shown in the table below.

The table below shows the results of Raju’s experiment.

<table>
<thead>
<tr>
<th>Catapult</th>
<th>Distance moved by the stone [m]</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>1st try</td>
</tr>
<tr>
<td>A</td>
<td>6.5</td>
</tr>
<tr>

<td>7.5</td>
</tr>
<tr>
<td>C</td>
<td>3.5</td>
</tr>
</tbody>
</table>

(a) Why did he carry out the experiment three times for each catapult? (1m)

__________________________________________________________________

(b) Arrange the catapults, A, B and C, in ascending order of the potential energy possessed by each rubber band. (1m)

(c) Raju wanted to use Catapult C to shoot the stone further. Suggest one way he could do it. (1m)

__________________________________________________________________

__________________________________________________________________
43. Jia Wei set up the following experiment to measure the change in temperature over ten minutes at 2 minutes intervals when four types of heating coil were used. The temperature of air in the box before the start of the experiment was 30°C.

The table below shows the results that he obtained.

<table>
<thead>
<tr>
<th>Material of heating coil</th>
<th>Temperature of air in the box (°C)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>2 minutes</td>
</tr>
<tr>
<td>A</td>
<td>40</td>
</tr>
<tr>
<td>B</td>
<td>40</td>
</tr>
<tr>
<td>C</td>
<td>40</td>
</tr>
</tbody>
</table>

(a) State the main energy conversions of the above experiment below: (2m)

\[ \text{in batteries} \rightarrow \text{in circuit} \rightarrow \text{heating coil} \]

(b) Based on the results, which material, A, B or C, is best suited to be used as a heating element in a kettle for boiling water? Explain your answer. (1m)

________________________________________________________________________
________________________________________________________________________
44. Siti conducted an experiment using three bath towels of the same mass. The mass of a dry bath towel is 300g. Study the table below carefully.

<table>
<thead>
<tr>
<th>Towel</th>
<th>Material</th>
<th>Exposed surface area</th>
<th>Location</th>
<th>Amount of water added to the towel at the start</th>
<th>Time taken for the towel to dry completely</th>
</tr>
</thead>

<tr>
<td>C</td>
<td>Cotton</td>
<td>40 cm²</td>
<td>In the house</td>
<td>300 ml</td>
<td>3h</td>
</tr>
</tbody>
</table>

a) How does the variable ‘location’ affect her experiment? (1m)

b) Explain why there is a difference in the time taken for Towel A and C to dry completely. (1m)

c) **Draw a line graph** in the diagram below to show the relationship between the exposed surface area and the rate of evaporation. **Label** the axes on the graph. (2m)
45. The diagram below shows a wheel that is turned by water. A generator is connected to the wheel to produce electricity.

(a) Identify the types of energy in the water at A. 

(b) If the other factors remain the same, how will it affect the amount of electricity produced? Explain your answer.

| 34a | Any of the 4 swollen leaf stalks. | 1m |
| 34b | There are **air spaces inside** the stalk to keep it afloat. | 1m | There is air – 0m (Ambiguous) |
| 34c | **Any one** of the following:  
It gives them shade.  
It provides them with oxygen (which is needed for survival).  
It gives the aquatic animals a place to hide from the predators.  
It provides them with food.  
It provides them with shelter. | 1m |
| 35a | Blood in A is richer in oxygen than C. The heart pumps out oxygen-rich blood to all parts of the body while oxygen has been used up by the cells in the stomach (during cell respiration). | 1m | Comparison must be made with explanation. |
| 35b | The heart needs to pump blood rich in oxygen (oxygenated blood) and digested food to all parts of the body to **provide more energy** for the activity. | 1m | To breathe faster – 0m  
To give more energy – 0m |
| 36a | Cell membrane | 1m |
| 36b | It cannot control the activities of the cell.  
OR  
It cannot pass genetic information from one generation to the next.  
OR It cannot reproduce | 1m | It does not have nucleus. - 0m  
It does not give the cell a regular shape. - 0m  
It cannot make its own food. - 0m |
| 37a | The pitcher plant trap and digest the insect to **provide nutrients for the plant** (1m) and hence this **reduce the competition for nutrients from soil with other bigger trees and plants.** (1m) | 2m | Partial mark  
To provide food for the plant. – 0m |
| 37b | Structural adaptation because these features are present in the plant. | 1m |
| 38a | The ink droplet will move towards Flask A/to the left because the air in Flask A contracts (when the flask is dipped into the iced water and thereby sucking the ink droplet towards it.) | 1m | No partial mark. |
| 38b | Heat up Flask B using a Bunsen burner or a candle.  
OR  
Put Flask B into a container of hot / boiling water. | 1m |
<p>| 39a | A and C. | 1m |
| 39b | Winding the toy bunny a few more rounds and there will be <strong>more</strong> elastic potential energy which is converted into <strong>more</strong> kinetic energy. | 1m | Winding up the bunny a few more rounds. – 0m |</p>

Tips for tackling PSLE Science

In order to do well in Science, mastery of process skills is necessary.
The table below gives a useful guide on some of the common process skills you would need to know.

<table>
<thead>
<tr>
<th>No.</th>
<th>Process Skill</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Observing</td>
<td>Examining something carefully so that you can gather information about it</td>
</tr>
<tr>
<td>2</td>
<td>Comparing</td>
<td>Identifying the similarities and differences between two or more things</td>
</tr>
<tr>
<td>3</td>
<td>Classifying</td>
<td>Sorting things or events into groups based on common characteristics or properties</td>
</tr>
</tbody>
</table>
| 4   | Analysing     | - Identify parts of a system  
              - Identify the relationship between parts  
              - Relate the parts to their functions  
              - Identify patterns and trends in data  
              - Identify the variables that affect the investigation  
              - Identify the relationship between variables |
| 5   | Generating    | - Draw inferences or conclusions from observations  
              - Make predictions  
              - Give reasonable explanations based on evidence  
              - Construct hypothesis  
              - Devise a method to test a hypothesis |

Answering open-ended science questions requires you to not only master the process skills but also learn to apply them in context.

You would also need to familiarise yourself with the terms used in open-ended questions.

The table below gives you a guide on the terms you would encounter.
Terms used in questions:

<table>
<thead>
<tr>
<th>No.</th>
<th>Term</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Describe</td>
<td>Give relevant details about an object or event. Not required to explain answer.</td>
</tr>
<tr>
<td>2</td>
<td>Explain</td>
<td>Give reasons or make something clear and simple to understand.</td>
</tr>
<tr>
<td>3</td>
<td>State</td>
<td>Simply write down the answer. No explanations required.</td>
</tr>
<tr>
<td>4</td>
<td>What does this experiment tell you?</td>
<td>Interpret the results of the experiment. State what the results mean.</td>
</tr>
<tr>
<td>5</td>
<td>What is the purpose / aim of this experiment?</td>
<td>State the aim of the experiment. Not required to interpret results or describe them.</td>
</tr>
<tr>
<td>6</td>
<td>What would happen? / Predict the results of the experiment.</td>
<td>Make logical predictions. No explanation is required.</td>
</tr>
</tbody>
</table>

Here are some useful tips to help you tackle open-ended questions.

- Read and understand the question.
- Look for the key words and underline them.
- Think of the topic related to the question.
- Think of the concepts that help to answer the question.
- Apply the appropriate concepts to answer the question.
- **Use scientific words to answer the question.**
- Note the marks awarded to each question in order to estimate the amount of information required in the answer.
Let us try applying the tips to this question:

Question:
Siti conducted an experiment using three bath towels of the same mass. The mass of a dry bath towel is 300g. Study the table below carefully.

<table>
<thead>
<tr>
<th>Towel</th>
<th>Material</th>
<th>Exposed surface area</th>
<th>Location</th>
<th>Amount of water added to the towel at the start</th>
<th>Time taken for the towel to dry completely</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Cotton</td>
<td>80 cm²</td>
<td>In the house</td>
<td>300 ml</td>
<td>2h 20 min</td>
</tr>
<tr>
<td>B</td>
<td>Polyester</td>
<td>80 cm²</td>
<td>Garden</td>
<td>500ml</td>
<td>50 min</td>
</tr>
<tr>
<td>C</td>
<td>Cotton</td>
<td>40 cm²</td>
<td>In the house</td>
<td>300ml</td>
<td>3h</td>
</tr>
</tbody>
</table>

a) How does the variable ‘location’ affect her experiment? (1m)

__________________________________________________________

__________________________________________________________

b) Explain why there is a difference in the time taken for Towel A and C to dry completely. (1m)

__________________________________________________________

__________________________________________________________
c) **Draw a line graph** in the diagram below to show the relationship between the exposed surface area and the rate of evaporation. **Label** the axes on the graph. (2m)

- Study the experimental set-up and understand what it is about. In any experimental set-up, you must be able to identify the changed variable and the dependent variable (what you are measuring or looking out for in an experiment).
- Having done that, identify the key words in the question. They have been highlighted for you.
- Ask yourself what concept or topic this question is related to. The words ‘exposed surface area’, ‘rate of evaporation’, etc should give you the clue.
- For (a), think of the factors affecting the rate of evaporation. Focus on which factor ‘location’ would be related to. The factors that are possible would be wind speed, humidity and temperature. Think about how each affects the rate of evaporation. In your answer, it is necessary to mention the ‘rate of evaporation’. This is an example of using scientific language in your answer.
- For (b), it is important that a **comparison** is made between the two towels. Again, identify the changed variable for the set-up. In this case, the changed variable, exposed surface area, is one of the factors affecting the rate of evaporation. Write in detail how this changed variable affects the results of the experiment. Again, use scientific language mentioned in the previous point.
- For (c), the clues to the axes are given in the stem of the question. They are ‘exposed surface area’ and ‘rate of evaporation’. You just need to decide which to place in the x- and y-axes. Generally, we place the changed variable on the x-axis and the dependent variable on the y-axis but this is not a hard or fast rule. The important thing is to accurately capture the relationship between the two variables in the form of the line graph that you are required to draw. Does the rate of evaporation increase with increased surface area? If so, your line graph should have an upward trend profile.
