

# Developmental Domains

## (4 to 6 years old)

This is a period of rapid brain development in your child, allowing them to learn new things every day.

### COGNITIVE

-  Your child will be particularly sensitive to the environment
-  Everything from proper stimulation to having the right amount of nutrition for learning can affect the development of this domain.

## MOTOR

- 🐥 Your child is developing more key functions such as memory, timing & sequencing
- 🐥 Start cultivating your child's fine motor skills as he/she starts preschool and learns to read & write

## COMMUNICATION

- 🐧 Your child is only engaged by a language that he/she understands & may ignore language that is foreign to them
- 🐧 He/she is also a better listener & will respond more quickly when spoken to
- 🐧 He/she is able to better express himself, string together longer, more complex sentences & follow instructions with more steps

## SOCIAL & EMOTIONAL

- 🐣 Your child will begin to understand the concept of multiple points of view
- 🐣 He/she will learn to cooperate with other children & learn about the concept of sharing & taking turns
